ABSTRACT

Thesis: 96 p., 26 figures, 21 tables, 4 annexes, 23 sources

MACROECONOMICS, MACROECONOMICS OF UKRAINE, ENDOGENE PARAMETERS, FORECASTING, AUTORREGREENCE, ANALYSIS OF TIME RANKS, EVIEWS.

The theme – "Estimation and forecasting endogenous parameters of Ukrainian macroeconomics".

Object of research – macroeconomic systems of the labor market and the market of goods.

Subject of research – economic models of aggregate demand and aggregate supply.

The purpose of the work is to evaluate and forecast endogenous parameters of Ukrainian macroeconomics based on the open statistics of the State Statistics Service.

Method of research – macroeconomic modeling, statistical analysis, time series analysis.

The relevance of this work is to allocate, assess and forecast endogenous macroeconomic indicators of Ukraine as a means of reviewing and forecasting the state of macroeconomics in Ukraine. Since standard statistics reveal the current situation to a certain extent, the relevance of this study can not be overestimated.

The estimation and forecast of the investigated parameters is carried out, the analysis of the received data is carried out. On the materials of the bachelor's work was published an article:

Zavodnik V.V. Estimation of endogenous parameters of macroeconomics of Ukraine.

Ways of further development of the subject of research - forecasting and estimating the results of the forecast for 2020 –... years.
